

Course: NICC Working With Animals

Unit: Anatomy

Purpose: To understand the Anatomy of animals

Objectives:

- Students will be able to Identify the bodily system
- Students will understand the functions of the bodily system
- Students will understand the process and importance of the bodily system

Materials Needed:

- **Computer , Textbook and Flashdrive**

TEACHER NOTES & COMMENTS:

Students should work with partners they have not previously worked with.

Students should be held accountable and make sure they are on task.

I had one group of boys not care and just didn't do this large project that was a reflection on their grade. Just because they were both lazy and didn't want to pick up other students slack .

Teaching Instructions

- **Students will sign out a laptop and pair up with a partner, students will then research using the internet and their text book to find everything they can about their animals system, the processes system goes through the importance of the bodily system and the important components of the system.**
- **Students will have two classes to work on this PowerPoint presentation before they will have to present it to the class.**
